

INOS Watcher

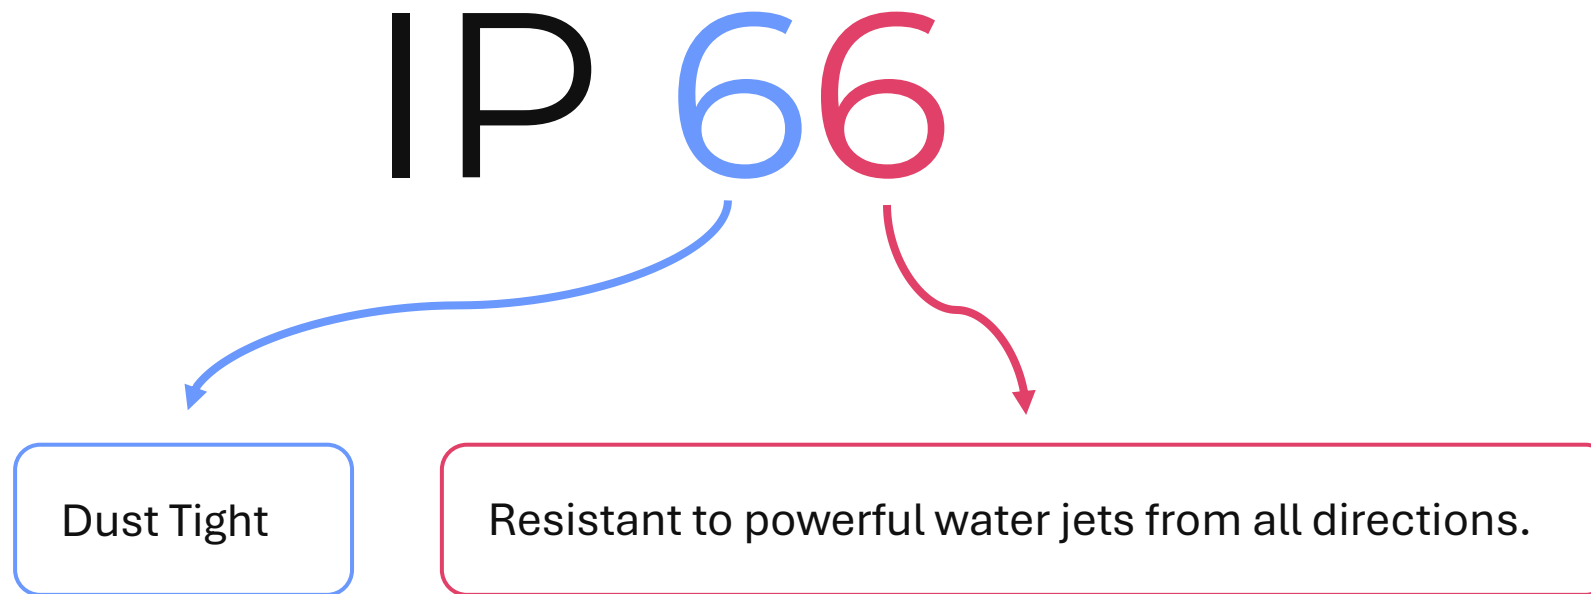

Deployment Environment

Heavy rainfall - Typhoons and wind-driven rain - Snow and ice - Hot, humid summers with solar exposure

Design Considerations

- Environmental protection
 - Thermal performance
- Long-term reliability (Longevity and ease of maintenance)

Updated Protection Rating

Updated Protection Rating

IP 66

Dust Tight

1. Dust filter media at intake
2. Lid is completely sealed
3. Internally, all the modules are IP68 rated

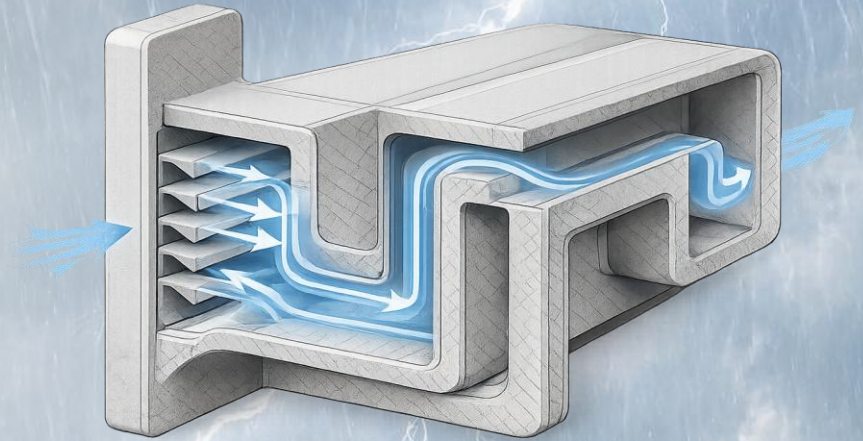

Updated Protection Rating

IP 66

Resistant to powerful water jets from all directions

Indirect path for air intake and exhaust to guard against:

1. Heavy wind-driven rain
2. Snow melt
3. powerful water jets from all directions

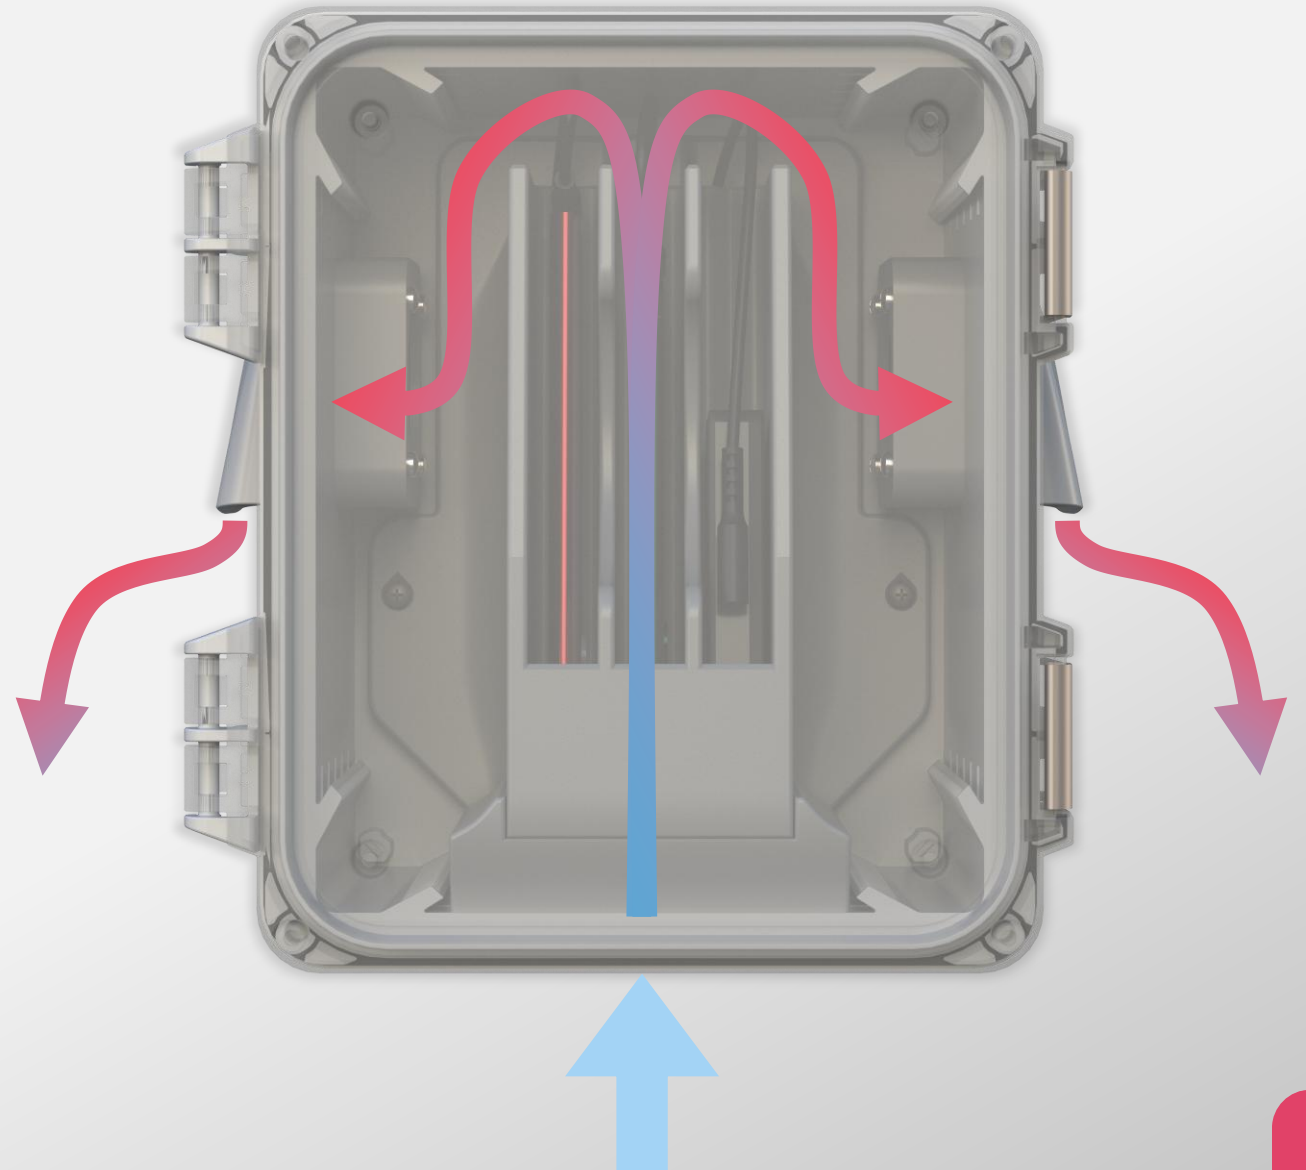

Weatherproof

UV resistant coated polycarbonate

Cooling

Engineered airflow that surrounds the phones from all directions

Cooling

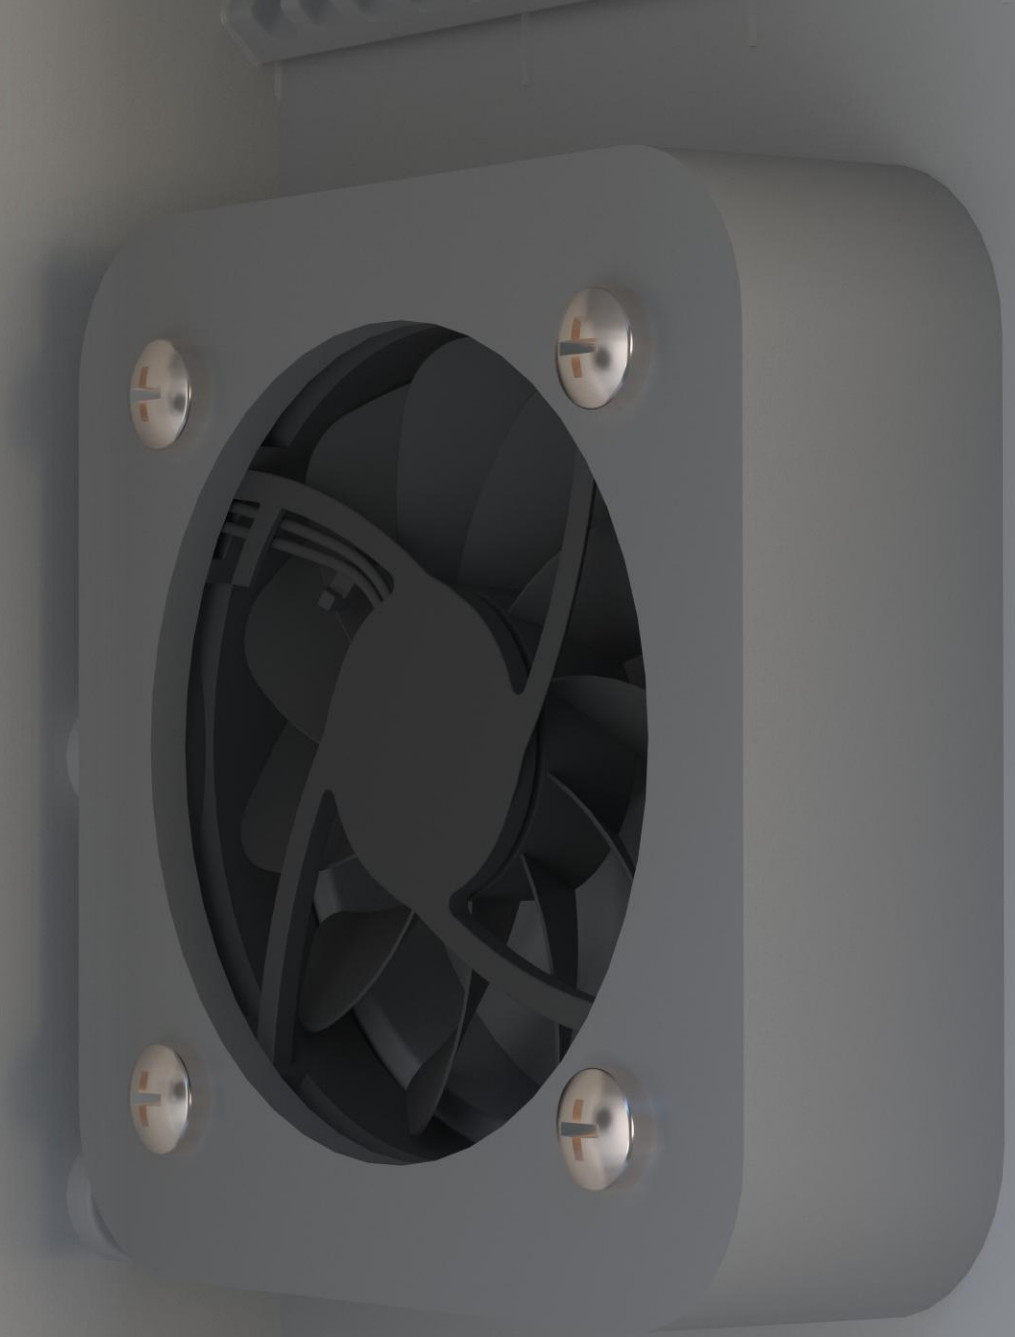

Cloud controlled fans

Cooling

Quite and high flow fans

Entire volume of air inside the probe changes **400 times/min**

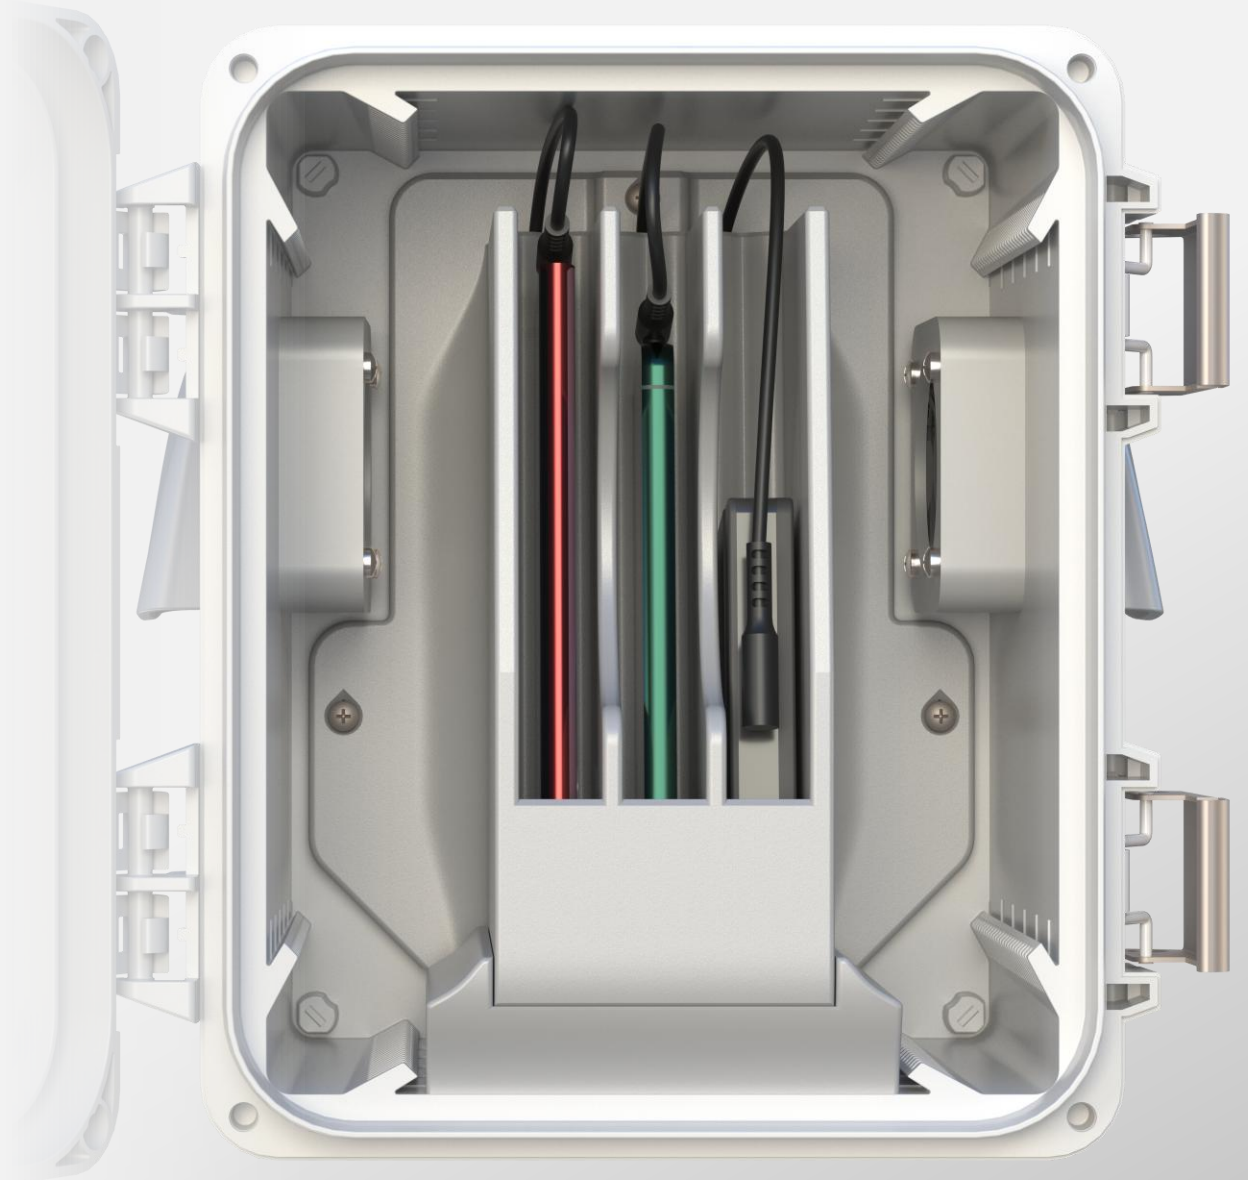

Mounting options

Pole, wall, and rack mounts

Ease of maintenance

- * Off the shelf components
- * Easy inspection – Quick replacement

Standalone version

Solar powered

Remote locations, trails, highways, etc.

Solar powered

Customize the system based on:

01 Solar panel sizing

Solar irradiance, geographic location, and seasonal variation.

03 Installation

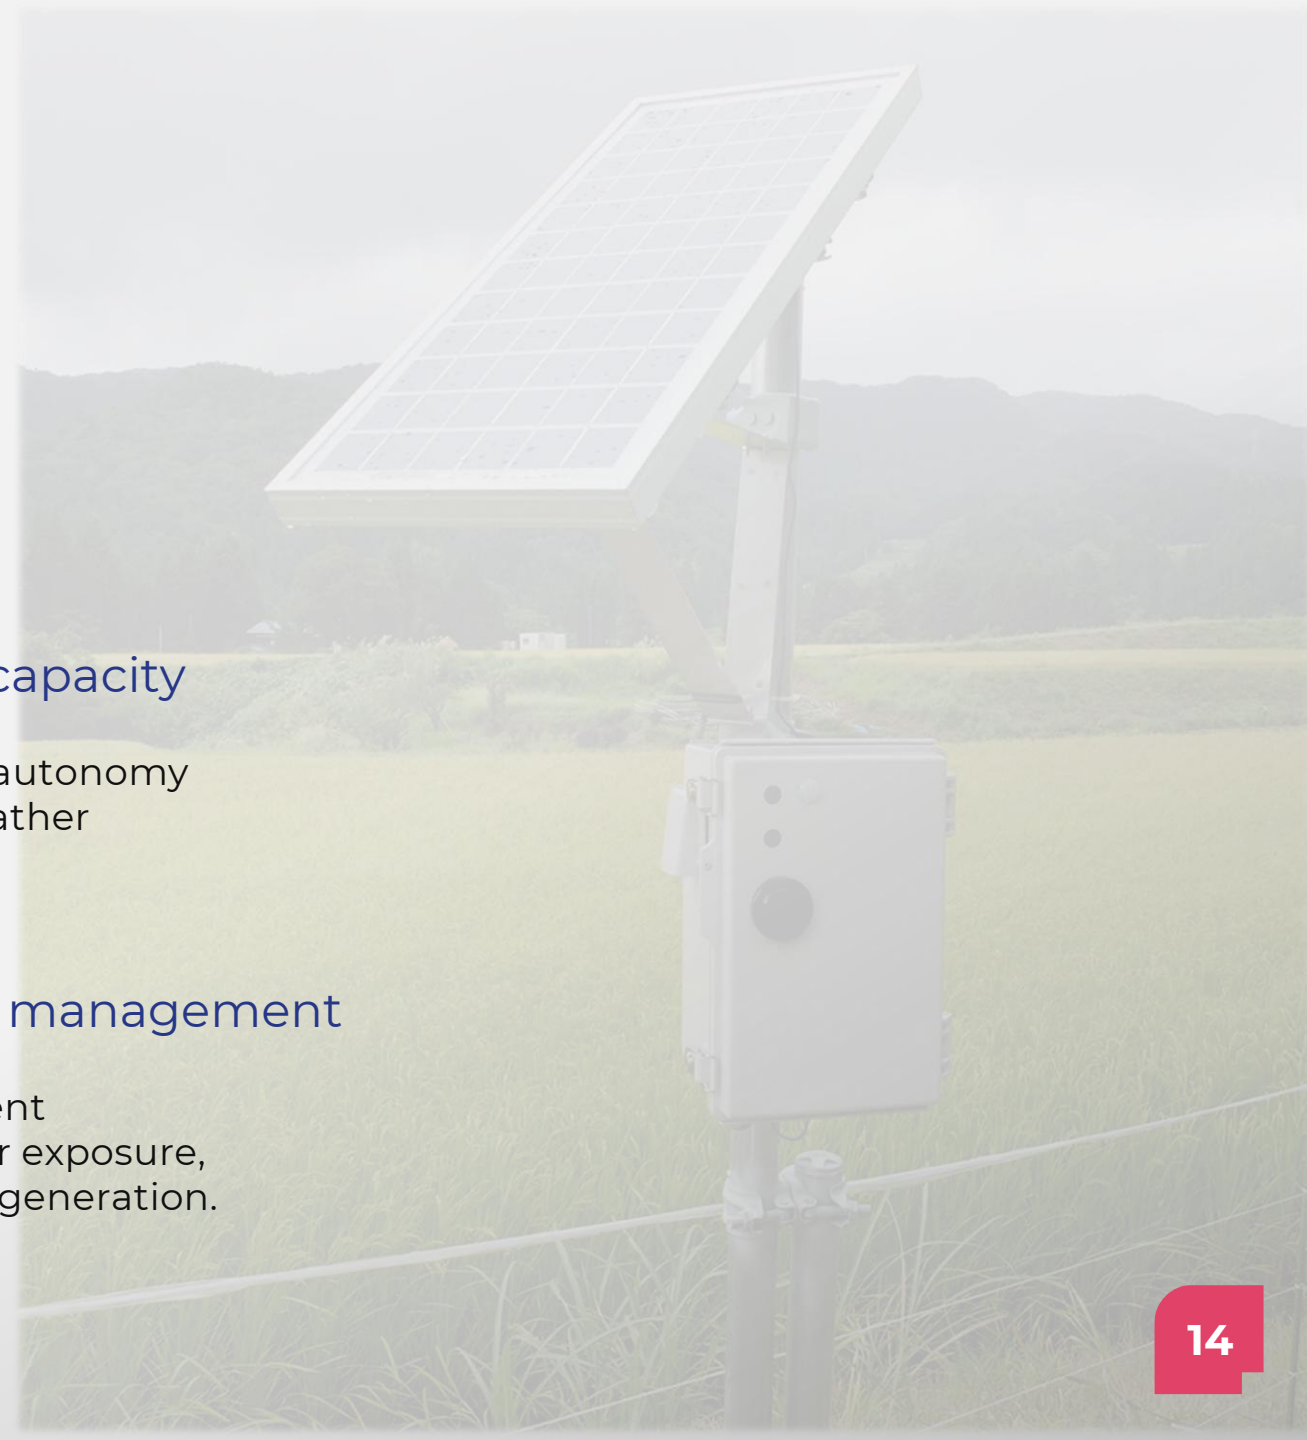

Mounting method, orientation, and tilt optimized depending on terrain, wind conditions, and site constraints.

02 Battery capacity

Required days of autonomy and expected weather conditions.

04 Thermal management

Adapted to ambient temperature, solar exposure, and internal heat generation.
